NOTE: The examples above are shown with fibre cement siding. Generally speaking most other exterior claddings increase the R-value/RSI value. You may wish to use the following RSI values for other claddings in place of the 5/16" fibre cement board above: 7/16" fibre cement panel (0.026), 3/4" coat stucco (0.03), wood siding (0.14), wood shingles (0.15), brick @ 4" (0.07), manufactured stone @ 1.5" (0.09), vinyl/aluminum (0.11). All numbers are approximate and may need to be verified.  
(†) The "S" product comes with 3/16" foam cover sheet on the exterior of the rainscreen cavity. Cover sheet blocks stucco and mortar in stucco/stone applications. No insulation value has been attributed to this cover sheet.
